 NOVAFON

Vibrational therapy in the professional beauty industry – gentle and effective

SKINOLGY stands for a handy sound wave device for the deep stimulation of skin, nerves, lymphatic tissue and facial muscles.

The NOVAFON SKINOLGY sound wave device generates frequencies of 50 Hz or 100 Hz in the audible sound range.

Unlike ultrasound therapy, your costumers can feel vibrations and leave your studio with an optimal effect on their skin feeling.

It uses a safe, proven technology that is unique in the cosmetics field. Originally, NOVAFON developed it for medical applications. It has been successfully used for over four decades – and it's now also available for beauty salons!

2 NOVAFON pro

The handy sound wave device for the professional cosmetics industry vibrates vertically down **to the deep layers of the skin**, and enables effects at the cellular level that a purely manual massage cannot achieve. It supports the absorption of beauty products in the skin, stimulates regeneration and, using the different attachments, allows further treatments, for example relaxing the facial muscles. **The results** of SKINOLOGY are something to be proud of: with every treatment, the skin appears firmer, stronger, rosier and more radiant. It is generally revitalised, and even swellings can be reduced. See for yourself.

3 Attachments for treatment

Disk attachment

The disk attachment is designed for preparing a facial, for effectively working in the active ingredients and serums for toning the skin.

Ball attachment

The ball attachment is particularly effective for targeted treatment of expression lines around the eyes, or vertical wrinkles around the lip area.

4

SKINOLGY treatment

The NOVAFON pro can be
easily applied in 3 steps

Preparation

Relaxation of the facial muscles and improvement of blood circulation in the skin

Work it in

Working the active ingredients and serums into the deep layers of the skin

Finish

Final massage, so your costumers will leave your studio with an optimal effect on their skin feeling

Mode of action

Every cell in our body vibrates, thereby renewing itself.

Vibrations and sound waves are the noticeable and audible diffusion of mechanical vibrations. The NOVAFON device is technically unique in terms of its vibration mechanism.

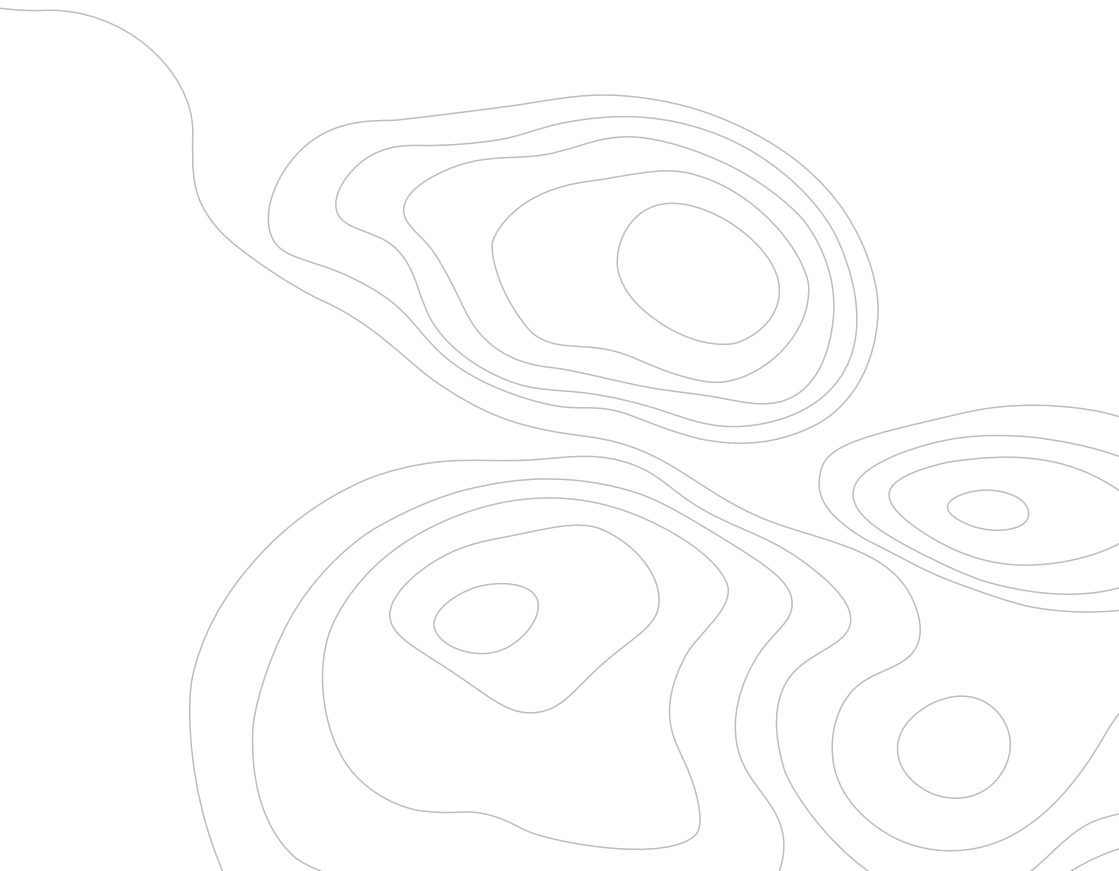

While many other vibrating massagers only shake the surface of the skin, the NOVAFON device vibrates vertically into the tissue, achieving deep muscle, nerve and lymphatic stimulation down to the cellular level.

For the skin, this means: tissue hardening (saccharification) is reduced, improving perfusion and the skin's ability to absorb oxygen, and stimulation of lymphatic tissue to alleviate swellings. It reaches all types of wrinkles, not only on the surface, but also at their origin, deep beneath the skin's surface.

Advantages for your beauty salon

- fully compatible with your treatment procedures
- enhance and **expand your range of services** with device-based applications
- **wide range of applications**, thanks to the various attachments and settings options
- use it straight away, with no need for training or a certificate
- **a modest investment** with a small footprint
- safe, proven technology from a **German manufacturer**
